11. ☑ The request for reconsideration has been considered bu See Continuation Sheet.	t does NOT place the application i	n condition for allowa	nce because:
12. Note the attached Information Disclosure Statement(s).	(PTO/SB/08 or PTO-1449) Paper I	۷o(s)	
13.  Other:			

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that Cao does not show a heat pipe and no separate substrate. This argument is not agreed with because the heat pipe is shown as part of a combination, and therefore, arguing that Cao does not show one does not obviate the rejection and because the claims, see claims 1, 21 and 38, are directed to a substrate. There is no limitation requiring that the substrate be separate. The claim further claims that the substrate be capable of conducting heat. As such using elements 402 and/or 702 as a substrate and a conductor of heat still meets the actual claim language. Applicant further argues that there is no motivation for the combination because Cao already has a heat sink that is efficient, and therefore, to add a less efficient heat pipe would not be motivated. This argument is disagreed with because the motivation for the combination is to locate the heat sink in the desired location, that a change in location may require a trade off in efficiency is a matter that the skilled artisan would understand in making the desired device. Applicant also argues that there is no showing of how to place the pipe in Cao. It is held that one of ordinary skill in the art would understand how to attach a heat pipe to the substrate of Cao and that any adjustments to the substrate such as size or heat conducting properties would have been obvious motifications.
